

Within the SR workflow

Assessment of the output

Required input

Permitted intervention

Evaluation involvement

Human role

Enables the workflow
to proceed

Optionally changes
a system decision or output

Provides a reference
standard or expert judgement

**Without this
involvement**

**Pipeline halts
until input is provided**

**Pipeline continues
without intervention**

**Output can be produced;
human assessment is absent**

Example

Reviewer sign-off before
screening decisions
are finalized

Optional correction of
a screening decision or
an extracted value

Original review decisions
reused as a reference, or
an expert panel's judgements

Report explicitly

Which stages require input;
who provides it and how

Where edits are accepted;
whether they were used

Source of human judgements;
which output was evaluated
