

	Within the SR workflow		Outside of the SR workflow
	Required input	Optional input	Output evaluation
Human role	Enables the workflow to proceed	Optionally changes a system decision or output	Provides a reference standard from experts
Without this involvement	Pipeline halts until input is provided	Pipeline continues without modification	Output can be produced; human assessment is absent
Example	Reviewer sign-off before screening decisions are finalized	Optional correction of a screening decision or an extracted value	Original review decisions reused as a reference, or an expert panel's judgements
